WHY BICOCCA

Bicocca is a young university that will connect you with students from all over the world. You will not just be a student here. You will be a member of the global community.

Since its foundation, the University of Milano-Bicocca has reached beyond its borders entering into various agreements with European and non-European universities.

Research is always global. Our teachers are members of international research groups that share numerous projects and initiatives, with a common commitment to increase the quality of teaching. Our focus on innovation offers students competitive and practical training.
The field of Medical Sciences at the University of Milano-Bicocca is at the forefront of international education and research and cutting-edge practice in clinical medicine and biomedical science. The Department brings together 12 degree courses across medicine and allied subjects:

- 7 Bachelor degrees
- 2 Master degrees
- 3 Single Cycle Master Degree

OUR INTERNATIONAL OFFER

In the field of Medical Sciences, our University offers the following 2 degree programs in English:

* Single Cycle Master Degree in Medicine & Surgery
* Post Graduate Degree in Biotechnology in Medicine (2 years)

There are more of 180 individual courses taught entirely in English.

OUR LOCATION

POST GRADUATE DEGREE IN BIOTECHNOLOGY IN MEDICINE is held at our Monza Campus.
SINGLE CYCLE MASTER DEGREE IN MEDICINE & SURGERY is held at the campus of University of Bergamo.
The 2 locations reflect our strong clinical and research partnership with the multi-specialty San Gerardo and Papa Giovanni XXIII hospitals.
# TABLE OF CONTENTS:

- 3D PRINTING FOR MEDICAL APPLICATIONS
- ADVANCES IN METABOLIC BONE DISEASES
- ALTERATIONS OF IRON METABOLISM (module)
- ANALYTICAL METHODS FOR NANOBIOTECHNOLOGY
- ANATOMY OF THE DIGESTIVE SYSTEM (module)
- ANATOMY OF THE ENDOCRINE SYSTEM AND URINARY TRACT (module)
- ANATOMY OF THE LOCOMOTOR SYSTEM (module)
- APPLICATION OF BIOSTATISTICS (module)
- ARTIFICIAL INTELLIGENCE IN HEALTHCARE
- ASSESSMENT INTERSHIP IN GENERAL PRACTITIONER OFFICE - MEDICAL BOARD EXAM
- AUTOMMUNITY: AUTOMMUNE LIVER DISEASES
- BASIC CLINICAL SKILLS
- BASIC COMPUTER SCIENCE
- BASIC COMPUTER SCIENCE (module)
- BASIC PATHOLOGY
- BASIC PHARMACOLOGY
- BASIC SCIENCES

3D PRINTING FOR MEDICAL APPLICATIONS

LECTURER: RIZZI CATERINA

CONTENTS

The course aims at providing the students with notions about the technological opportunity and challenges about Additive Manufacturing (AM) processes applied to the medical field.

The working principles of the most relevant Additive Manufacturing technologies will be shown for the production of medical devices, prostheses, orthoses and implants. Notable case studies will be shown and discussed.

PREREQUISITES

None.

ADVANCES IN METABOLIC BONE DISEASES
LECTURER: TREVISAN ROBERTO, CASSIBBA SARA

CONTENTS
Osteoporosis and others most common phospho-calcium disorder.

PREREQUISITES
Propaedeutic skills.

WEBSITE
https://elearning.unimib.it/course/info.php?id=35640
CONTENTS

The aims of the Course is to provide the student with a critical knowledge of the regulatory mechanisms of iron metabolism and related disorders (iron deficiency, primary and secondary iron overload, local and systemic), and technical instruments and strategies normally employed in studying the pathophysiology of iron metabolism and related disorders, and possible new therapeutic approaches.

Presentation of several emblematic examples of diseases of iron metabolism and their physiopathology, and the role of biotechnology in their diagnosis/therapeutic approach. A general introduction on the methodologies employed to analyse the molecular mechanisms underlying the pathological processes will be provided.

PREREQUISITES

Advanced knowledge in genetics, biology and molecular biology

WEBSITE  https://elearning.unimib.it/course/info.php?id=37995

ANALYTICAL METHODS FOR NANOBIOTECHNOLOGY
LECTURER: MANTEGAZZA FRANCESCO, SALERNO DOMENICO

CONTENTS
The course aims to provide the students with the knowledge on the general principles enabling to understand which kind of information can be achieved by the most important analysis techniques for nanobiomaterials characterization.

To learn the working principles of the most important analytic techniques and of the most relevant instrumentations used for the characterization of nanoparticles and nanomaterial of biomedical interest.

PREREQUISITES
Basic knowledge in chemistry, biochemistry and molecular biology.

ANATOMY OF THE ENDOCRINE SYSTEM AND URINARY TRACT (module of “Endocrine Kidney and Urinary Tract Diseases” - H4102D029)

LECTURER: ROSCIGNO MARCO

CONTENTS
The course aim to consolidate the knowledge of normal, topographic and surgical anatomy of the endocrine system and urinary tract, focusing on the correlations between anatomy and surgical and clinical practice. The lessons will cover the most important fields of the endocrine and urological anatomy. Students will acquire the basic knowledge required to understand the anatomy of the endocrine and urinary system and their relationships with surgery and clinical practice.

PREREQUISITES
Basic knowledge of fundamentals of biology, genetics, morphology, histology, physiology of the uro-genital system.

ANATOMY OF THE LOCOMOTOR SYSTEM (module of “Locomotor System Diseases” - H4102D018)
LECTURER: GUERRASIO STEFANO

CONTENTS
Gross anatomy and organization of the locomotor system. Description of the structure and function of bones, joints, ligaments and skeletal muscles. Analysis of the movements of individual joints and the body as a whole. Basic anatomical knowledge allowing students to take proper history and perform clinical examination of the musculoskeletal system.

PREREQUISITES
Basic knowledge of histology and anatomy as gained during the 2 term in "Fundamentals of Human Morphology".

APPLICATION OF BIOSTATISTICS (module of Biostatistics - H4102D009)

LECTURER: REBORA PAOLA

CONTENTS

The student will be able to calculate the main descriptive indexes and to appreciate the characteristics of a sample by descriptive statistics and plots. The student will be able to evaluate the accuracy of a diagnostic test by the sensitivity, specificity and predictive value indexes. The student will be able to calculate specific probabilities from Gaussian and Binomial distribution. The student will be able to calculate statistical tests for means and proportions and confidence intervals. The student will know how to critically read the methodology and results paragraphs of a clinical paper.

The study of the liver as a lymphoid organ is a growing field fueled by our better knowledge of the different component of the immune system and how they orchestrate an immune-related response. The liver have highly specialized mechanisms of immune tolerance, mainly because is continuously exposed to microbial and environmental antigens, and dietary components from the gut. Growing evidences show that the liver produces a pletora of neo-antigens being the primary metabolic organ of the body.

Common immune mechanisms play a key pathogenetic role in most of acute and chronic liver diseases and in the rejection of liver allografts.

Any perturbations of liver-related immune functions have important clinical implications, such as the development of autoimmune liver diseases, i.e. autoimmune hepatitis, primary biliary cholangitis, and primary sclerosing cholangitis, a great paradox for a tolerogenic organ.

PREREQUISITES
Medical student from years 3 to 6.
CONTENTS

The aim of this course is to present several examples of diseases and their physiopathology, and the role of biotechnology in their diagnosis/therapeutic approach. A general introduction on the methodologies employed to analyse the molecular mechanisms underlying the pathological processes will be provided.

PREREQUISITES

4. Pathology and Medicine (ref. H4102D035M)

LECTURER: CLEMENTINA ELVEZIA COCUZZA

CONTENTS

The course aims to introduce the student to the knowledge of the causes of human diseases, the students will be able to understand the fundamental pathogenetic and pathophysiological mechanisms. During the course, topics for in-depth knowledge on the molecular mechanisms underlying the disease pathogenesis to identify potential therapeutic targets will be developed.

PREREQUISITES

5. Medical Physics II (ref. H4102D005M)

LECTURER: RE FRANCESCA

CONTENTS

The primary goal of the course is to provide students with the tools for the understanding of the complex reactions that represent the molecular basis of life, and with the fundamentals to identify the cause-effect relations of the most important biochemical, chemical and physical processes for the curriculum and the work of a physician. This knowledge will form the primary basis for a rationale approach to the knowledge of medical sciences.

PREREQUISITES

Basic knowledges of mathematics, physics, biology.

BIOCHEMISTRY I (module of Basic Sciences - H4102D001)
LECTURER: CORBO CLAUDIA

CONTENTS
The Biochemistry I module will illustrate the importance of life-sustaining chemical reactions. The objects of study are the structure and the metabolic pathways involved in the transformations of cell components, such as proteins, carbohydrates, lipids, nucleic acids, and other biomolecules. Moreover, the main hormones and their role in the regulation of metabolism will be described. Finally, the main components of the foods will be described in relation to a healthy diet.

PREREQUISITES

CARDDIOLOGY (module of Cardiovascular diseases and Respiratory Sciences—H4102D024)
LECTURER: BADANO LUIGI, CARAVITA SERGIO, BILO GRZEGORZ MAREK

CONTENTS
The course will provide essential and up-to-date theoretical knowledge of the clinical diagnosis and management of a wide spectrum of cardiovascular diseases. The course presents the field of cardiology in a concise and practical manner, addressing the learning needs of medical students. The acquired knowledge will contribute to a better understanding of the causes, diagnosis, and treatment options of cardiac pathologies. Gender differences in epidemiology, clinical presentation, and prognosis will be also addressed.

PREREQUISITES
Basic cardiovascular pathology and diagnostics, fundamentals of human genetics, physiology, and pharmacology of cardiovascular system.

CASE BASED LEARNING AND GENERAL CLINICAL PRACTICE
LECTURER: MANTOVANI LORENZO GIOVANNI

CONTENTS
The objectives of the course are to involve students in an early clinical activity designed to understand how to interact professionally with patients, starting from the most common clinical cases, experiencing a holistic approach to the patient and the diseases. Furthermore, to learn the principles of clinical reasoning and to acquire the basics of the professionalism, of patient-centred medicine and of clinical responsibility.

PREREQUISITES
Basic knowledge of anatomy, physiology, pharmacology.

WEBSITE  https://elearning.unimib.it/course/info.php?id=35568

CARDOVASCULAR ANATOMY I (module of Cardiovascular diseases and Respiratory Sciences—H4102D024)

LECTURER: SENNI MICHELE

CONTENTS
The lessons will cover the most important aspects related to the embryological, anatomic and functional features of cardiovascular system, with focus on the anatomic description of the heart and major blood vessels. Students will acquire the basic knowledge required to recognize cardiac and vessels anatomy and understand the location, spatial relationships and function of its most important structures.

PREREQUISITES
Basic knowledge of fundamentals of biology, genetics, morphology, histology, physiology of the cardiovascular system.

WEBSITE  https://elearning.unimib.it/course/info.php?id=35488

SCMD
YEAR: 4
SEM: 1
ECTS: Only if the entire course is frequented

CELL AND MOLECULAR BIOLOGY I (module of “Fundamentals of Cell Biology and Genetics” - H4102D002)

LECTURER: INTRONA MARTINO

CONTENTS

The course will provide the essential theoretical knowledge of biology, also focusing on the possible future application in the medical field. The subjects of the course will provide the necessary knowledge to understand the vital processes, both on the cellular and molecular level.

Structure and function of the most important cellular macromolecules; DNA duplication and repair mechanisms; transcription and RNA processing; translation and protein sorting; transcriptional and post-transcriptional regulation; signal transduction pathways; molecular and cellular mechanisms which control the cell cycle, cellular growth and differentiation as well as cell-to-cell interactions.

PREREQUISITES

Basic sciences (chemistry, physics).

WEBSITE  https://elearning.unimib.it/course/info.php?id=35601

CONTACT: martino.intra@unimib.it
CELL AND MOLECULAR BIOLOGY II (module of Fundamentals of Cell Biology and Genetics - H4102D002)

LECTURER: MOLOGNI LUCA

CONTENTS
The course will provide the essential theoretical knowledge of biology focusing on the possible future application in the medical field.

PREREQUISITES
Basic sciences (chemistry, physics).

CONTENTS

The aims of the Course is to provide an overview of the current and most relevant applications of biotech in the development of new treatment strategies. The two tracks of the course include the targeting treatment and the development of cellular and gene therapy. The first part will cover the process of identification of new potential targets for treatment by using high-throughput technologies, the screening of active molecules and the preclinical and clinical development. Diseases in the field of cancer will be taken as cases in point. The second part will present the preclinical and clinical development of a product for cellular and gene therapy in the field of cancer, treatment of infections in immunocompromised hosts, and tissue regeneration. Emphasis will be given to the knowledge of the process of production under “GMP” conditions.

PREREQUISITES

Basic knowledge on pathology and immunology. Advanced knowledge in biochemistry, molecular biology and genetics.

WEBSITE  https://elearning.unimib.it/course/info.php?id=37989

CHEMISTRY AND PROPEDEUTIC BIOCHEMISTRY I (module of Basic Sciences - H4102D001)

LECTURER: SMITH ANDREW JAMES

CONTENTS
In the first part of the course the principles of chemical kinetics and chemical equilibrium, redox reactions and related energy will be presented within the general frame of thermodynamics and electrochemistry, and finally the water self-ionization and the properties of acid/base and buffer solutions will be illustrated.

In the second part, the reactivity of the main classes of organic compounds, including isomerism and the stereo chemical concepts related to organic molecules containing asymmetric carbon atoms of the course will describe. The properties of the mains class of macromolecules of biological interest (proteins, lipids, carbohydrates and nucleic acids) will be illustrated. Basic knowledge of proteomics and of Imaging by MS focused on clinical applications will be provided.

PREREQUISITES
Basic mathematical knowledges
Basic chemistry knowledges
Basic Biology and chemistry knowledge
Basic knowledge of analytical science.

CLERKSHIP I

LABORATORIES: 1. Chemistry and Propaedeutic Biochemistry II (ref. H4102D017M)
2. Cell and Molecular Biology (ref. H4102D018M)
3. Basic Computer Science (ref. H4102D019M)

LECTURER: MAGNI FULVIO

CONTENTS

Chemistry and Propaedeutic Biochemistry II: Practical laboratory activities useful for medical students. Practical laboratory activities with computers and personal applications. Group discussion of scientific papers useful for medical students.

Basic computer science: Practise the knowledge on computer related methodologies and technologies employed in medical informatics and to apply those methods in solving problems arising in different areas of medicine and the healthcare system (starting from personal use).

Cell and Molecular Biology: To learn the new advances in cell and molecular biology techniques, and critically evaluate their use in a clinical setting.

PREREQUISITES

The attended Chemistry, cell biology and propedeutical biochemistry courses. Basic knowledge in the use of computers. Attendance of the basic computer science course.

LABORATORIES: 1. Biochemistry (ref. H4102D023M)
               2. Medical Physics (ref. H4102D024M)
               3. Histology (ref. H4102D025M)

LECTURER: CAVALETTI GUIDO ANGELO, CORBO CLAUDIA, SALERNO DOMENICO

CONTENTS

Biochemistry: The students are introduced to the main biochemical techniques and to the instruments, reagents and materials needed for biochemistry assay (to analyse protein, lipid and sugar).

The students are introduced to the main histological techniques and to the instruments, reagents and materials needed for histological analysis.

Medical Physics: Students will receive the practical, theoretical and IT skills to analyse and to correctly understand the experimental data. This knowledge will form the primary basis for a rationale approach to the knowledge of medical sciences.

Histology: Students will be able to the understand the basic histological techniques, to prepare histological samples for the observation of the structure and ultrastructure of the main biological tissues. There will be the supervision of qualified laboratory staff by using an "on field" approach.

PREREQUISITES

College-level scientific knowledge and basic knowledge of mathematics and analysis and IT.

LECTURER: COCUZZA CLEMENTINA ELVEZIA

CONTENTS

The course aims to provide the student with the fundamental principles and knowledge for the interpretation of the laboratory results in the diagnosis of infectious diseases.

* Laboratory methods for the diagnosis of infectious diseases.
* Laboratory methods for evaluating bacterial susceptibility to antimicrobial agents.
* Phenotypic and genotypic methods for microbial characterization and typing.
* Interpretation of Clinical Microbiology laboratory results.

PREREQUISITES

Knowledge on the content of the Microbiology and Virology module of the course on Basic Pathology.

3. Prosthesis and Rehabilitation (ref. H4102D061M)
4. Rheumatology (ref. H4102D062M)
5. Clinical Biochemistry (ref. H4102D063M)
6. Microbiology (ref. H4102D064M)

LECTURER: CHIODINI FEDERICO

CONTENTS

The goal of clerkship is the acquisition of practical skills related to diagnostics and to the clinic and to the treatment of the musculoskeletal system.

Clerkship program, with rotation in small groups (about max 10 students) in surgical specialties, general practitioner and in the emergency department:

* PBL / CBL
* Practice sessions with puppets or among students/teachers
* Attending clinical wards.

PREREQUISITES

Vertical track Locomotor attendance.

CLERKSHIP V

LABORATORIES:
1. Oncology I  (ref. H4102D073M)
2. Oncology II (ref. H4102D074M)
3. Hematology (ref. H4102D075M)
4. Infectious Diseases (ref. H4102D196M)
5. Dermatology (ref. H4102D197M)

LECTURER: RAMBALDI ALESSANDRO

CONTENTS

Oncology I: Understanding the basis of immunological treatments in the context of solid tumours and the biology and clinical behavior of skin, gastrointestinal and lung tumours.

Oncology II: Understanding the basis of targeted therapies in the context of solid tumours and the biology and clinical behavior of breast, head and neck and gynaecological cancers.

Hematology: (I) Understanding the biology and normal physiology of blood coagulation; Understanding the biology and clinical behaviour of hemorrhagic and thromboembolic diseases, and microangiopathy anemias; Principles and clinical practice of Blood transfusions. (II) Understanding the basis of hematopoietic stem cell transplantation; Understanding the biology and clinical behavior of Aplastic anemias, Paroxysmal Nocturnal Hemoglobinuria, hemolytic anemia and megaloblastic anemias.

Infectious Diseases: Bacterial infections in onco-hematologic malignancies; Fungal infections in hematologic malignancies; Viral complications of bone marrow transplantation; Vaccinations policies in onco-hematologic patients.

Dermatology: Understanding the clinical features and pathophysiology of cutaneous lymphomas, the clinical and histological features of basal cell and squamous cell carcinomas, drug-related dermatoses during the treatment of onco-haematologic malignancies, Understanding the importance of clinico-pathological correlations in the diagnosis of skin neoplasms.

CLERKSHIP VI

LABORATORIES:
1. Biostatistics (ref. H4102D099M)
2. Cardiac Surgery (ref. H4102D094M)
3. Cardiovascular (ref. H4102D093M)
4. Endocrinology and Metabolic diseases (ref. H4102D076M)
5. Modeling and Simulation I (ref. H4102D096M)
6. Modeling and Simulation II (ref. H4102D097M)
7. Respiratory Sciences (ref. H4102D100M)
8. Vascular Surgery (ref. H4102D095M)

LECTURER: LORINI FERDINANDO

CONTENTS

Biostatistics: Recap on study designs, sampling methods, confidence intervals. Linear regression; Logistic regression; Survival analysis;

Cardiac Surgery: Students will acquire the basic knowledge required to recognize the main cardiac pathologies suitable of surgery and the most important technical procedures.

Cardiovascular: Understanding the basis and clinical behavior of ischemic heart disease, heart failure/assist device/heart transplant, cardiac arrhythmias, valvular heart disease, congenital heart disease

Endocrinology and Metabolic Diseases: The endocrine system is a network of glands and organs that produce, store, and secrete hormones. It influences many aspects of the cardiovascular system, which include the heart and blood vessels. While hormones play a necessary role in maintaining healthy cardiovascular function, high or low levels of some can contribute to cardiovascular disease.

Modeling and Simulation I: Students will acquire the basic knowledge required to investigate blood flow distribution and the role of physical parameters in cardiovascular function

Modeling and Simulation II: N/A

Respiratory Sciences: Students will acquire the basic knowledge required to take history and recognize acute and chronic respiratory failure signs, obstructive and restrictive diseases signs and symptoms.

Vascular Surgery: The clerkships will cover the most important aspects related to surgical treatment of vascular pathologies as aneurysms, carotid disease, peripheral artery disease.

CONTRAST MEDIA AND RADIOPHARMACEUTICAL (module of “Image Diagnostics”- H4102D014)
LECTURER: MORESCO ROSA MARIA

CONTENTS
The pharmacological aspects of diagnostics medicinal products. Topics include fundamental of pharmacokinetics, pharmacodynamics and regulatory aspects related to their use in Diagnostic imaging.

Pharmacology of Diagnostic Medicinal Products
Radiological contrast media: Chemical and pharmacological characteristics of biological relevance that differentiate contrast media; Main therapeutic indication and clinical and evidence based rational for the clinical use of contrast media; Main adverse event, procedures to predict, prevent and manage contrast media related adverse event. Pharmacovigilance. Radiopharmaceuticals: Nature and characteristics of radioisotopes, with specific reference to those used in diagnostic imaging; Fundamentals of radiochemistry, radiopharmaceuticals and radiopharmacology. Medicines for optical imaging: mechanism of action, instrumentation, kinetics of biodistribution and safety aspects. Risk benefit assessment for contrast media; Regulatory affairs relative to their classification and reimbursement.

PREREQUISITES
Basic knowledge on chemistry, physics and physiology and pharmacology that will be presented during the course when necessary.

CONTENTS
To provide the basic knowledge concerning the most important imaging modalities and their clinical use in the context of muscle-skeletal radiology. The role of conventional radiology in emergency clinical trials, and the role of cross-sectional imaging modalities will be assessed as well. The main aim of the course is to clarify how specific imaging techniques have to be employed in relation to the clinical issue.

Conventional X rays examinations of the skeletal structures in different clinical settings. Computed tomography (CT) and Magnetic Resonance Imaging (MRI) in the most common and relevant clinical circumstances, in traumatology, and orthopedic settings. Ultrasound examination as a possible diagnostic alternative in specific conditions.

PREREQUISITES
Basic knowledge of human anatomy, physiology, and general pathology.

WEBSITE  https://elearning.unimib.it/course/info.php?id=35539
DIAGNOSTICS (module of “Cardiovascular Diseases and Respiratory Sciences” - H4102D024)

LECTURER: SIRONI SANDRO

CONTENTS

The course will provide the essential theoretical knowledge of the key diagnostic tests used for the clinical identification and management of cardiovascular diseases. The acquired knowledge will contribute to a better understanding of the major indications and clinical value of each diagnostic tool. Students will also learn how to interpret basic findings of test results and cardiovascular reports.

Clinical cardiovascular exam; electrocardiogram; chest X-ray; echocardiographic techniques; cardiac computed tomography; cardiac magnetic resonance; scintigraphy; positron emission tomography; invasive hemodynamics; electrophysiology study; cardiac angiography and intracoronary imaging.

PREREQUISITES

Basic cardiovascular anatomy and physiology, cardiovascular and respiratory pathology and diagnostics.

CONTENTS

The primary goal of the course is to provide students with the pathophysiologic basis to understand the clinical and surgical semeiotics and the physiopathology of endocrine system in order to make correlations between the inner mechanisms of diseases and their clinical expression. The student will be able to interpret symptoms, signs and laboratory tests as well as radiologic and endoscopic findings. Clinical tools to understand concepts of organ-limited disease, systemic involvement or systemic disease will be provided.

PREREQUISITES

Propaedeutic skills.

WEBSITE  https://elearning.unimib.it/course/info.php?id=35519
ENDOCRINOLOGY AND CANCER
LECTURER: ROSSINI ALESSANDRO

CONTENTS
The main goal of the course is to explore the close relationship between cancer and the endocrine system. The student will be able to understand how genetic traits regulating the activity of endocrine organs as well as the exposure to environmental factors interfering with the hormonal balance can influence the risk of cancer.

Moreover, an insight on the effect of cancer therapies on hormonal homeostasis, associated with development of endocrinological disease, will be provided.

2. Alterations of Iron Metabolism (ref. F0901D096M)
3. Gastro-intestinal Diseases (ref. F0901D097M)

LECTURER: BARISANI DONATELLA

CONTENTS
The aim of the Course is to provide the student with a critical knowledge of the technical instruments and strategies normally employed in defining the pathophysiology of the various disorders and possible new therapeutic approaches.

The aim of this course is to present several examples of diseases and their physiopathology, and the role of biotechnology in their diagnosis/therapeutic approach. A general introduction on the methodologies employed to analyse the molecular mechanisms underlying the pathological processes will be provided.

PREREQUISITES
Advanced knowledge in genetics, biology and molecular biology.

FUNDAMENTALS OF HUMAN MORPHOLOGY

MODULES:
1. General Anatomy (ref. H4102D205M)
2. Regional Anatomy (ref. H4102D026M)
3. Histology (ref. H4102D021M)

LABORATORY:
1. Microscopic Anatomy (ref. H4102D022M)

LECTURER: CAVALETTI GUIDO

CONTENTS

The student will be able to communicate effectively with colleagues and to use and understand anatomical language appropriately. Knowledge of accepted general anatomical terminology will be achieved.

The general features of the systems further described in detail in “Cardiovascular and Respiratory diseases” and “Neuroscience I and II” will be addressed. Specific reference to clinical anatomy features will also be performed.

Students will be able to describe the structure and ultrastructure of the eukaryotic cell and the morphology correlate with the function of each organelle; then they will be able to describe the structure and morpho-functional characteristics of human tissues (epithelial, connective, muscle and nervous tissues) as well as to describe the main events of gametogenesis and early embryogenesis.

The student will be able to indicate the normal microscopic organization of the main organs of the human organism. The microscopic and functional structure of the organs of the digestive, respiratory, urinary, genital, lymphatic, nervous, endocrine and integumentary organs will be addressed in preparation to histopathological assessment.

CONTENTS

At the end of the course students:

- will have acquired an initial competence in identifying and differentiating the relational elements in the medical patient interaction;

- will have acquired the ability to recognize some basic mechanisms of one's relationship style.

- will recognize and describe the characteristics of the different attachment styles and the implications for the relationship of care with the patient;

- will know how to recognize and describe interpersonal motivational systems (activation, deactivation, related emotions).

* Interpersonal motivational systems
* Attachment in the relationship with patients
* Human dimension in doctor patient relationship

GENERAL PHYSIOLOGY I (module of “Fundamentals of Human Physiology” - H4102D010)
LECTURER: RIVOLTA ILARIA

CONTENTS
The course is based on the systematic presentation of physiological concepts underlying the functions of the human body. The sequence of events leading to an imbalance of a specific function cannot be appreciated without a deep understanding of the basic biophysical and physiological mechanisms. Therefore, these mechanisms that guarantee functions at the cellular and tissue level will be presented. In particular, membrane transports, neuronal, muscular and cardiac cell excitability, the physiology of sensory systems, the motor control and muscle contraction will be analyzed.

* Transports across the cell membranes
* Calcium homeostasis
* Neuromuscular junction. Physiology of the contraction in smooth and striated muscles
* Electric activity of the heart (introduction to ECG)
* Control of extracellular volume and osmolarity. Starling hypothesis

PREREQUISITES

The aim of the course is to give the basic knowledge of the structural and molecular mechanisms of the immune system. The immune system is an integrated set of molecules and cells that work in a coordinated way to maintain the body's homeostasis and protect it from foreign agents, such as microorganisms and their products.

The course will address the dynamics and complexity of humoral and cell-mediated immune responses and the main alterations of the mechanisms of immune-mediated diseases. At the end of the course the student will be able to describe: the organization of the immune response towards the different types of insults; the peculiarities of the different components of the immune system; the main pathological mechanisms of immune-mediated diseases.

PREREQUISITES

INFECTIONOUS DISEASES
LECTURER: PUOTI MASSIMO, RIZZI MARCO

CONTENTS

* Principles of epidemiology, diagnosis, treatment and prevention of Infectious Diseases

* By the end of the course, the student will be able to:

  * Describe the etiology, the epidemiology (including the route of transmission), the clinical picture and the natural course of the principal infectious diseases and infective syndromes

  * Integrate such knowledges with the choice of the appropriate diagnostic path for each disease or syndrome (including anamnesis, identification of relevant symptoms and signs, laboratory assessment, radiological tests, diagnosis of complication and differential diagnosis)

  * Describe the therapeutic and preventive measures for the principal infectious diseases and infective syndromes

  * Know the fundamentals of antimicrobial chemotherapy of the most important infectious diseases

PREREQUISITES
Knowledge of the introductory courses indicated in the degree course regulations

WEBSITE  https://elearning.unimib.it/course/info.php?id=35569
INFLAMMATORY BOWEL DISEASES (MICI)

LECTURER: CARBONE MARCO

CONTENTS
The course is focused on the diagnosis and therapeutic management of patients with inflammatory bowel disease. The students will be exposed to a variety of expertise in an interactive format. There will be experts in the field of basic science, clinical management, radiology, GI endoscopy, bowel pathology focused on ulcerative colitis and Crohn's disease

PREREQUISITES
*From the 4th year of the course of Medicine and Surgery

WEBSITE  https://elearning.unimib.it/course/info.php?id=35643
INSTRUMENTATION FOR DIAGNOSTIC IMAGING AND RADIOTHERAPY (module of “Image Diagnostics”- H4102D014)

LECTURER: GILARDI MARIA CARLA

CONTENTS

Diagnostic imaging instrumentation:
* X-ray imaging: revision of physical principles and image formation; multislice CT, cone beam CT, mammography, angiography
* Magnetic Resonance Imaging: revision of physical principles and T1/T2 image formation; diffusion weighted and perfusion weighted MRI, fMRI, spectroscopy
* Echography: physical principles and image formation; echographic probes
* Nuclear Medicine Imaging: revision of physical principles and image formation; PET/CT and PET/RM hybrid instrumentation

Radiotherapy instrumentation:
* Linear accelerator and components
* Intensity Modulated Radiotherapy (IMRT), Image Guided Radiotherapy (IGRT), tomotherapy
* Cyber knife, gamma knife.

PREREQUISITES
* Physics basic knowledge.

INTERNERSHIP IN INFECTIOUS DISEASES – UOC MALATTIE INFETTIVE PGXXIII HOSPITAL BERGAMO

LECTURER: RIZZI MARCO

CONTENTS
The student will attend the Infectious Diseases department (outpatient clinic and Infectious Diseases unit).
Each student will be assigned, on a daily basis, to an infectious diseases physician for the daily working activities. In the outpatient clinic, the student will have the opportunity to participate to specific outpatient clinics (i.e. HIV, hepatology, bone infections, tuberculosis, sexually transmitted diseases). In the inpatient section the student will participate to ward round (COVID patients and other infective acute syndromes).

PREREQUISITES
Basic Clinical Skills course. It is recommended that the student has already passed the Infectious diseases examination.

MECHANISMS AND BIOMARKERS OF NEURONAL DAMAGE
(module of Translational Approach To Neurological Disorders - F0901D047)
LECTURER: FERRARESE CARLO, TREMOLIZZO LUCIO

CONTENTS
This course aims at contributing to the training of a medical biotechnologist able to integrate basic principles of neuroscience in order to understand the biological basis, main pathogenic mechanisms and experimental models regarding nervous system disorders. Models will be analyzed stressing critical aspects and role in the development of novel therapeutic strategies.

PREREQUISITES
Basic knowledge of anatomy and histology, physiology and general pathology and neuropharmacology.
Advanced knowledge of biochemistry, molecular biology and genetics.

MICROBIOLOGY AND VIROLOGY (module of Basic Pathology - H4102D011)

LECTURER: Mc FADDEN JOHN JOSEPH
COCUZZA CLEMENTINA ELVEZIA

CONTENTS
The course aims to provide the students with knowledge on the fundamental principles of the microbial etiology and pathogenesis of the major human infectious diseases.

* General characteristics of microbial pathogens.
* Microbial genetics.
* Microbial pathogenesis.
* General characteristics of bacterial pathogens.
* Virulence factors and mechanisms of bacterial pathogenesis.
* Bacterial pathogens and associated diseases.
* Viral pathogens and associated diseases and viral-induced oncogenesis.
* Principles of laboratory diagnosis of infectious diseases.
* Antimicrobial agents and resistance.
* Strategies for infectious diseases prevention and control.
* Health Care Associated Infections.

PATHOLOGY (module of “Endocrine Kidney and Urinary Tract Diseases” - H4102D029)
LECTURER: PAGNI FABIO

CONTENTS

NEPHROPATHOLOGY
At the end of the course the student will be able to:
1) Know histopathology, immunofluorescence and ultrastructural (Transmission Electron Microscopy) of the main glomerular renal diseases.
2) Interpret tests and diagnostic investigations in order to diagnose kidney diseases.
3) To use the knowledge of normal histology and others basic disciplines in dealing with organ and/or apparatus pathologies. To be able to critically evaluate the commonly used diagnostic methods in pathology. To know the indications of renal biopsy.

ENDOCRINE PATHOLOGY
Endocrine pathology is the subspecialty of surgical pathology which deals with the diagnosis and characterization of neoplastic and non-neoplastic diseases of organs of the endocrine system, including the thyroid, parathyroids, endocrine pancreas, and adrenal glands.

PERIODONTOLOGY (module of “Head and Neck Diseases”-H4102D036)
LECTURER: CACCIANIGA GIANLUIGI

CONTENTS
The course aims to lead the student to the knowledge of the anatomical aspects of the periodontium, of the correlated pathophysiology, of the diagnostic and therapeutic aspects able to adequately diagnose and treat all the pathologies of the periodontium, in its purely medical and surgical aspects. Particular importance is given to the correlation of periodontal disease with the main systemic diseases related to it. Remarkable emphasis is given to the most modern therapeutic procedures that use advanced technologies, in order to reduce the invalidity of therapeutic protocols. The student will understand the importance of laser-assisted techniques in the treatment of periodontal disease.

PREREQUISITES
Completion of the examination in General Dentistry Disciplines

PHYSIOLOGY (module of Cardiovascular Diseases and Respiratory Sciences - H4102D024)

LECTURER: ZAZA ANTONIO

CONTENTS
The course aims to provide a basic understanding of cardiovascular function and its homeostatic regulation; heart-lung interaction and the main consequences of cardiac and vascular dysfunction will also be addressed. The course should provide a background for the pathophysiological interpretation of cardiovascular disease.

Cardiac physiology and adaptations (in health and disease); physiology of the systemic and pulmonary circulations; regulation of cardiovascular function; methods of measurement of cardiovascular function.

PREREQUISITES
Fundamentals of human physiology module (by Profs. Sancini and Rivolta)

SOCIETY AND HEALTH I (module of “Medicine and Society”-H4102D013)
LECTURER: CORTESI PAOLO ANGELO

CONTENTS
The key aim of this course is to learn about the principal issues surrounding health and society. The course focus on the main determinants of population health and risk factors of disease, and explore how epidemiology and public health can more effectively assess, protect and promote the health of populations.

The course starts with concepts about disease, health and health promotion/protection/prevention. Next, we focus on behavioral, biological, socio-economic, environmental and access to care factors that influence the health status of individuals or populations. Specific attention is paid to the role of Public health in promote and protect health and addressing factors which influence the health status of populations. The course also discuss global health, the international organizations and agencies created to protect and promote global health and the tools developed to assess global health. Furthermore, we address health systems developed in Italy and other countries to provide care to the populations.

PREREQUISITES
None.

CONTENTS
This course aims at contributing to the training of a medical biotechnologist able to integrate basic principles of neuroscience in order to understand the biological basis, main pathogenic mechanisms and experimental models regarding nervous system and cardiovascular diseases. Models will be analyzed stressing critical aspects and role in the development of novel therapeutic strategies.

PREREQUISITES
Basic knowledge of anatomy and histology, physiology and general pathology and neuropharmacology.
Advanced knowledge of biochemistry, molecular biology and genetics.

TURNING CLINICAL EXPERIENCE INTO RESEARCH PROJECTS

LECTURER: BIONDI ANDREA

CONTENTS

The program of this course intends to introduce the student to the practice of clinical research by following two paths. The first will indicate the basis that led to the generation of scientific evidence on which diagnostic and therapeutic decisions are based in the individual patient; the second will cover the reverse path and will develop the notions that the student must know in order to collect and examine the results of his activity in the real life that could be used to generate hypotheses of new controlled studies.

PREREQUISITES

None.

UROLOGY (module of “Endocrine Kidney and Urinary Tract Diseases” - H4102D029)
LECTURER: DA POZZO LUIGI FILIPPO

CONTENTS
The lessons will cover the most important urological syndromes: bladder outlet obstruction, benign prostatic hyperplasia, urinary tract infections, urinary stones, erectile disfunction. Students will acquire the basic knowledge required to diagnose and manage the main uro-oncological pathologies: prostate, kidney, bladder and testicular cancers.

PREREQUISITES
Basic knowledge of fundamentals of biology, genetics, morphology, histology, physiology of the uro-genital system.

CONTENTS
This course focuses on pathophysiology, clinical evaluation, diagnosis and treatment of vascular diseases.

The lectures will cover the most important aspects related to surgical treatment of vascular pathologies as aneurysms, carotid disease, peripheral artery disease and venous disease. Students will acquire the basic knowledge required to diagnose the most important vascular disease and will learn about treatment indications and main surgical procedures.

PREREQUISITES
Basic anatomy, physiology, pathology and diagnostics of vascular diseases
