- SCIENCE
- SOCIOMETRY
WHY BICOCCA

Bicocca is a young university that will connect you with students from all over the world. You will not just be a student here. You will be a member of the global community.

Since its foundation, the University of Milano-Bicocca has reached beyond its borders entering into various agreements with European and non-European universities.

Research is always global. Our teachers are members of international research groups that share numerous projects and initiatives, with a common commitment to increase the quality of teaching. Our focus on innovation offers students competitive and practical training.
The field of Science at the University of Milano-Bicocca comprises of 6 leading departments that offer a diverse portfolio of teaching and research in physics, mathematics, biosciences, computer science, material science and environmental science.

- Dipartimento Di Biotecnologie E Bioscienze
- Dipartimento Di Fisica "Giuseppe Occhialini"
- Dipartimento Di Informatica, Sistemistica E Comunicazione
- Dipartimento Di Matematica E Applicazioni
- Dipartimento Di Scienza Dei Materiali
- Dipartimento Di Scienze Dell'ambiente E Della Terra

The departments bring together the following degree programs:

- 10 Bachelor degrees
- 13 Master degrees of which 2 completely taught in English

OUR INTERNATIONAL OFFER

In the field of Science, our University offers the following degree programs in English:

MARINE SCIENCES

MATERIALS SCIENCE

There are a total of 99 individual courses taught entirely in English across different Degree Programs.

OUR LOCATION

All courses in the field of Science are held at our Milan campus.
**TABLE OF CONTENTS:**

**ASTROPHYSICS AND SPACE PHYSICS**  
* COSMIC RAYS  
* COSMOLOGY  
* EXTRAGALACTIC ASTRONOMY  
* GRAVITATIONAL WAVE ASTROPHYSICS  
* QUANTUM FIELD THEORY I  
* STELLAR ASTROPHYSICS

**BIOLOGY**  
* ANALYSIS AND MANAGEMENT OF BIOCOENOSIS

**CHEMICAL SCIENCES AND TECHNOLOGIES**  
* CHEMISTRY OF INORGANIC MATERIALS  
* CHEMISTRY OF MOLECULAR MATERIALS  
* LOW ENVIRONMENTAL PROCESSES  
* MEDICINAL CHEMISTRY  
* SOLID STATE AND SURFACE PHYSICAL CHEMISTRY  
* SYNTHESIS AND SPECIAL ORGANIC TECHNIQUES IN MATERIAL CHEMISTRY  
* THERMODYNAMICS AND KINETICS OF MATERIALS  
* THERMODYNAMICS AND KINETICS OF MATERIALS

**COMPUTER SCIENCE**  
* ADVANCED MACHINE LEARNING  
* ARTIFICIAL INTELLIGENCE  
* CLOUD COMPUTING  
* DATA AND COMPUTATIONAL BIOLOGY  
* DATA AND TEXT MINING  
* EVOLUTION OF SOFTWARE SYSTEMS AND REVERSE ENGINEERING  
* UBIQUITOUS, PERVERSIVE & CONTEXT-AWARE COMPUTING

**DATA SCIENCE**  
* DATA MANAGEMENT AND VISUALIZATION  
* DATA SEMANTICS  
* DECISION MODELS (module)  
* MACHINE LEARNING (module)  
* MACHINE LEARNING AND DECISION MODELS  
* TEXT MINING AND SEARCH

**GEOLOGICAL SCIENCES AND TECHNOLOGIES**  
* 3D GEOMODELLING  
* ACTIVE TECTONICS AND VOLCANOTECTONICS  
* ADVANCED METHODS IN STRUCTURAL GEOLOGY  
* ASSESSMENT OF GEOLOGICAL RISKS  
* BIOFACIES  
* FUNDAMENTALS OF MARINE PHYSICAL GEOGRAPHY  
* GEOBIOLOGY  
* GEOCHRONOLOGY AND ARCHEOMETRY  
* GEONERGY  
* PALEOCEANOGRAPHY AND PALEOCLI-MATOLOGY  
* PHYSICS OF THE SEA  
* SEDIMENTARY PETROLOGY

**INDUSTRIAL BIOTECHNOLOGIES**  
* MEDICINAL CHEMISTRY

**MARINE SCIENCES**  
* APPLIED GEOMORPHOLOGY AND HABITAT  
* APPLIED MARINE GEOLOGY  
* BIODIVERSITY AND MARINE ECOLOGY  
* BIODIVERSITY (module)  
* BIOFACIES  
* CHEMISTRY OF INORGANIC MATERIALS  
* CHEMISTRY OF MARINE ENVIRONMENT  
* COASTAL AND MARINE BOTANY  
* COASTAL AND MARINE HAZARD AND RESILIENCE  
* COASTAL AND MARITIME TOURISM  
* COASTAL RISK AND DYNAMICS  
* COMMUNICATION SKILLS AND INTERPERSONAL RELATION MANAGEMENT  
* ENVIRONMENTAL JUSTICE AND GEOPOLITICS OF THE SEA  
* FUNDAMENTALS OF MARINE BIOLOGY  
* FUNDAMENTALS OF MARINE PHYSICAL GEOGRAPHY  
* GEOBIOLOGY  
* HUMAN GEOGRAPHY OF SMALL ISLAND SYSTEMS  
* INTERNATIONAL LAW OF THE SEA AND MARINE ENVIRONMENT PROTECTION  
* MANAGEMENT OF AQUATIC RESOURCES: FISHERIES  
* MARINE ECOLOGY (module)  
* MARINE ENVIRONMENTAL MICROBIOLOGY  
* MARINE INVERTEBRATE ZOOLOGY  
* MARINE MOLECULAR BIOLOGY  
* MARINE VERTEBRATE ZOOLOGY  
* PALEOCEANOGRAPHY AND PALEOCLI-MATOLOGY

3D GEOMODELLING*
LECTURER: BISTACCHI ANDREA  LUIGI PAOLO

CONTENTS
The course regards 3D geomodelling techniques, which are discussed in theory and implemented in exercises with industry-standard software.

PREREQUISITES
Tectonics and structural geology.

WEBSITE  https://elearning.unimib.it/course/info.php?id=25753

YEAR: 2
SEM: 1
ECTS: 4
DEGREE in  Geological Sciences and Technologies
CONTACT: andrea.bistacchi@unimib.it

*IF THE TITLE APPEARS IN ITALIAN, PLEASE CHECK THE ENGLISH VERSION.
CONTENTS
The general objectives comprehend the preparation of students in order to carry out geological-structural analyses applied to the recognition of recent and active tectonic deformations. In the second part of the course, students will analyse the structures in volcanic areas in order to distinguish those produced by tectonic forces from those caused by magmatic forces.

PREREQUISITES
Base knowledge of geology, structural geology and geomorphology.

WEBSITE  https://elearning.unimib.it/course/info.php?id=25771

YEAR: 1
SEM: 1
ECTS: 6
DEGREE in Geological Sciences and Technologies
CONTACT: alessandro.tibaldi@unimib.it

*IF THE TITLE APPEARS IN ITALIAN, PLEASE CHECK THE ENGLISH VERSION.
ADVANCED MACHINE LEARNING
LECTURER: BIANCO SIMONE, CANDELIERI ANTONIO, MESSINA VINCENZINA

CONTENTS
This machine learning advanced course is aimed especially for students who are already familiar with the basics of machine learning and wish to strengthen their knowledge and explore important advanced topics in order to posses in-depth and wide range capabilities at this so important field.
The course will cover some of the most important advanced topics in machine learning such deep learning and reinforcement learning, with their underlying theory but also a focus on modeling and practical implementation.
These advanced techniques will be applied to a number of applications, including: image recognition, natural language processing, recommendation systems.

PREREQUISITES
Basic Machine Learning techniques.

WEBSITE  https://elearning.unimib.it/course/info.php?id=25376

YEAR: 2
SEM: 1
ECTS: 6
DEGREE in Computer Science
CONTACT: enza.messina@unimib.it
**ADVANCED METHODS IN STRUCTURAL GEOLOGY**
**LECTURER: BISTACCHI ANDREA LUIGI PAOLO**

**CONTENTS**
The course covers advanced techniques for the collection, analysis and modelling of quantitative structural geology data at different scales in the field and in the lab.

**PREREQUISITES**
Tectonics and Structural Geology.

ANALYSIS AND MANAGEMENT OF BIOCOENOSIS*
LECTURER: ABDULLA NASEER

CONTENTS
The present course examines key aspects and critical issues of marine aquaculture, as part of the primary production activity (aquaculture) with the largest growth rate among other food production techniques worldwide. Aquaculture nowadays supply fifty percent of fish products consumed in the world. The big challenge that aquaculture is facing concerns with sustaining and ever increasing demand circumscribed by environmental sustainability Therefore, the course aims to provides and overall knowledge of marine aquaculture, its potential in food security and the negative aspects/mitigations measures of the subject.

PREREQUISITES
None.

APPLIED GEOMORPHOLOGY AND HABITAT
LECTURER: BASSO DANIELA MARIA, SAVINI ALESSANDRA

CONTENTS
This course deals with the geomorphological and geobiological characterization of benthic habitats, with an emphasis on marine benthic bioconstructions of the temperate Mediterranean Sea and the shallow water tropical reef environments. It focuses on field and remote observations of characteristic habitats and their multi-scale relationships with the associated abiotic components. Environmental issues, related to the role of habitat mapping and monitoring in marine ecosystem management, are explained and discussed using case histories. Laboratory activities will offer the students the opportunity to use traditional and new advanced methods and techniques for mapping and modelling the distribution of marine benthic habitats.

PREREQUISITES
Introduction to Marine Physical Geography, Geobiology, Invertebrate zoology (base level) or systematic and general Palaeontology.

WEBSITE  https://elearning.unimib.it/course/info.php?id=25832

YEAR: 1
SEM: 2
ECTS: 6
DEGREE in Marine Sciences
CONTACT: daniela.basso@unimib.it
          alessandra.savini@unimib.it
APPLIED MARINE GEOLOGY
LECTURER: MARCHESE FABIO, NOMIKOU PARASKEVI

CONTENTS
To provide knowledge on the major geological hazards in marine and coastal environment, which are caused by geological processes that change dramatically the environmental conditions and present severe threats to coastal populations, offshore and onshore properties and offshore built infrastructures.

The course will provide basic knowledge about the use of innovative marine technologies to identify the marine geohazards and inherent risks and our ability to deal with them.

PREREQUISITES
Physics of the Sea; Introduction to Marine Physical Geography; Law of the Sea.

WEBSITE  https://elearning.unimib.it/course/info.php?id=25820

YEAR:  2
SEM:  1
ECTS:  6
DEGREE in  Marine Sciences
CONTACT:  fabio.marchese1@unimib.it
CONTENTS

Aims of the lectures (5 CFU) are to supply the student with base knowledge about the physical chemistry of ionic conductors and the electrochemistry and its application in the energy conversion by electrochemical devices and in corrosion and protection of metals. The lab part (3 CFU) is devoted to the characterization of materials and electrodes for secondary batteries and electrochromic applications. In the lab FT-IR, XRPD, electrochemical and spectroelectrochemical techniques will be used.

PREREQUISITES

Standard physic and mathematic knowledge, thermodynamic and kinetic of chemical system.

WEBSITE  https://elearning.unimib.it/course/info.php?id=25603
CONTENTS

The course will provide an overview of domains in which socio-cognitive theories and research have been applied outside the laboratory to influence public policies. The course will be devoted to examining a sample of behavioral domains and contexts in which applied research has made contributions. These include political issues (e.g., promoting participation, reducing inequalities and improving intergroup relations), psychological and physical health (e.g., promotion and prevention behaviors), environmental concerns (e.g., climate change), mass media effects (e.g., scientific misinformation and conspiracy theories). Practical problems and ethical issues unique to the applied research will be considered.

PREREQUISITES

No previous knowledge is required. Good knowledge of the basis of Social Psychology enables more aware fruition of the course contents. Students lacking such basic knowledge are encouraged to ask for a list of basic references.

ARTIFICIAL INTELLIGENCE
LECTURER: BIANCHI F., MESSINA V., PALMONARI M. L., VIZZARI GIUSEPPE

CONTENTS
The aim of the course is to enable the student to master the knowledge and basic tools necessary to comprehend, use and create Artificial Intelligence systems, together with the ability to analyze classes of problems particularly suitable to be solved with methods and techniques that characterize the discipline. The practical and at the same time explorative nature of Artificial Intelligence will invite the student to learn how to discriminate among problems for which current solutions can be used and innovative directions of research in this field. The students will be given conceptual, computational and basic methodological tools to understand and develop innovative solutions to automation problems through advanced Artificial Intelligence techniques. The course is aimed at students who aspire to enter into work and research environments where innovative choices prevail for the solution of complex problems and areas with a strong multidisciplinary component.

PREREQUISITES
Basic knowledge of logics and mathematics.

ASSESSMENT OF GEOLOGICAL RISKS*
LECTURER: FRATTINI PAOLO

CONTENTS
The course aims at providing concepts and methodologies for the analysis, the evaluation and the mitigation of geological risks.

Definition of hazard, vulnerability and risk. Description and assessment of flood risk, seismic risk, landslide risk and snow avalanche risk. Introduction on coastal risks and volcanic risk.

PREREQUISITES
None.

*IF THE TITLE APPEARS IN ITALIAN, PLEASE CHECK THE ENGLISH VERSION.
CONTENTS
The aim of the course is to highlight the applications of a few classes of polymers, and both up-to-date scientific methods and technological processes to improve their properties.

The course encompasses advanced technological processes in the synthesis and transformation of polymers, including new methods of polymer synthesis, introduction to hybrid materials and nanochemistry with particular emphasis to preparation and characterization of polymer materials endowed with heterogeneous interfaces and new functional properties.

PREREQUISITES
Basic knowledge of macromolecular chemistry.

WEBSITE  https://elearning.unimib.it/course/info.php?id=25604

YEAR:  1
SEM:  2
ECTS:  6
DEGREE in  Materials Science
CONTACT:  angiolina.comotti@unimib.it
CONTENTS
Describe and discuss relevant methods for the synthesis of functional inorganic and hybrid organic-inorganic materials, focusing on the choice of precursors and development of suitable process conditions in order to synthesize materials with the required composition, structure and physico-chemical properties.
Introduce the student to fundamentals of mechanisms of nucleation and crystal growth.

PREREQUISITES
General and inorganic chemistry, physical chemistry, basic crystallography.

CONTENTS

The course aims to provide students with knowledge about the processes and mechanisms that regulate the chemical composition of the sea and oceans. A special attention is given to climate change impact on the chemistry of the Oceans.

The course CHEMISTRY OF MARINE ENVIRONMENT provides an understanding of the chemical composition of seawater and related chemical reactions. Equilibrium and steady state conditions in aqueous solution are discussed. A particular attention is also given to priority and emerging pollutants.

PREREQUISITES

Basics of inorganic and organic chemistry.

WEBSITE  https://elearning.unimib.it/course/info.php?id=25837

CHEMISTRY OF MOLECULAR MATERIALS*
LECTURER: BEVERINA LUCA

CONTENTS
Molecular materials are rapidly gaining momentum, both in terms of scientific research and technological applications. Aim of the course is to provide a detailed knowledge of the structure properties relationships ruling the behaviour of such materials, with particular emphasis on electronic, optical and optoelectronic properties.

PREREQUISITES
Molecular based materials require an interdisciplinary approach. Elements of Materials science, Organic chemistry, Physical chemistry, Medicinal chemistry, environmental chemistry, physics.... (depending on the application) are required

CLOUD COMPUTING
LECTURER: CIAVOTTA MICHELE, DE PAOLI FLAVIO MARIA, TUNDO ALESSANDRO

CONTENTS
The goal of the course is to provide students with fundamental elements to understand and design distributed service-oriented applications. After the course, students will master the most important models for distributed systems based on Cloud technology, and the basic characteristics of languages and tools for their development. They will be able to analyze and design applications based on microservices and container-based technology.

PREREQUISITES
Thorough comprehension of networking and distributed system principles to design and develop distributed applications.

COASTAL AND MARINE BOTANY
LECTURER: GENTILI RODOLFO FILIPPO

CONTENTS
This subject will focus on algae and plants of both marine submerged and emerged environments and particularly on marine microalgae, macroalgae and seagrasses and on terrestrial plants belonging to costal vegetation, with a special emphasis on those typical of Mediterranean and tropical regions.

PREREQUISITES
None.

WEBSITE  https://elearning.unimib.it/course/info.php?id=25821

YEAR: 2
SEM: 1
ECTS: 6
DEGREE in Marine Sciences
CONTACT: rodolfo.gentili@unimib.it
CONTENTS
The course explores the complexity of the relationship between culture, risk and disaster. The aim is to increase understanding of how best to deal with the risks associated with coastal and marine environments, and to examine human resilience to risk, exploring the cultural dimension of disaster.

Definitions and uses of the terms hazard, risk and disaster, vulnerability and resilience. Hazards, risks and disasters in marine and coastal areas. Culture, knowledge and world views related to hazards. The cultural dimension of disaster risk reduction (DRR). Cultural and political aspects of disasters, catastrophes and natural hazards (tsunamis, floods, climate change): adaptation, mitigation and resilience. Governance, stakeholders, communication and participation.

COASTAL AND MARITIME TOURISM
LECTURER: MALATESTA STEFANO

CONTENTS
This course aims at critically examining tourism activities and industry in coastal regions and marine spaces, focusing on social, economic and cultural impacts of tourism development in these specific contexts. Various types of tourism - such as ecotourism - in coastal and marine locations will be presented and discussed based on a number of selected case studies (e.g: the Mediterranean Sea, Venice, the Black Sea; the Caribbean islands; The Red Sea; The Maldives). Moreover, the course will provide critical insights to explore the relationship between tourism economies and performances, socio-spatial practices and environmental issues, and finally it will explore coastal and marine tourism policies, strategies and guidelines as promoted by EU and other institutional agencies.

COASTAL RISKS AND DYNAMICS
LECTURER: VICINANZA DIEGO

CONTENTS
The course is intended to provide basic knowledge of coastal processes for the proper management of the coastline from a physical point of view. The knowledge on maritime hydraulics (wave genesis, wave transformations, coastal currents), sediment transport and beaches morphodynamic will be deepened. Coastal risk elements will be presented, with particular regard to coastal erosion and possible defense approaches. The main techniques for studying and monitoring the coastal system will be examined. The part of the Coastal Risk Course aims to provide the student with advanced knowledge in the study and forecast of the impact of catastrophic events on the coastline. The training obtained can be applied for Civil Protection purposes and to minimize impacts on coastline.

COMMUNICATION SKILLS AND INTERPERSONAL RELATION MANAGEMENT
LECTURER: STREPPARAVA MARIAGRAZIA

CONTENTS
The course will provide the basic knowledge of communication skills (dyadic and group) and a general overview of the most important psychological mechanisms involved in interpersonal relationship; students will learn these basic principles also by practical experiences and exercises (group activities, role-play, case simulation) and will learn some emotions and behaviors regulation strategies.

PREREQUISITES
None.

DEGREE in Marine Sciences
CONTACT: mariagrazia.strepparava@unimib.it
CONTENTS

The main goal of the Course is to provide to the students some key theoretical/computational tools for approaching at the atomic scale thermodynamics and kinetics of solids.

Summary of basic concepts in classical statistical mechanics, adiabatic approximation, classical approximation for the motion of nuclei, ab initio and classical molecular dynamics, scientific coding with Matlab, implementation in Matlab of a molecular dynamics code, application of the molecular dynamics code, configurational Monte Carlo, implementation of a configurational Monte Carlo code, kinetic Monte Carlo, transition state theory.

PREREQUISITES

Basic classical and quantum mechanics. Knowledge of the Boltzmann distribution.

CONSUMER PSYCHOLOGY

LECTURER: OLIVERO NADIA

CONTENTS

The course provides a complete overview of the main topics of Consumer Psychology and integrates theoretical contributions with case histories from main brands and companies.

The course is divided in three parts.

* The first one is about theoretical and scientific models for the understanding of the consumer as an individual, and focuses on decision making, perception, and learning.

* The second part is concerned with motivation, attitudes, identity construction in relation with products consumption and brands, the role of the socio-cultural context, the social group and advertising.

* The third part explores fields of application such as ‘information communication technologies for consumer research and strategy, food consumption, marketing of experience and non-conventional marketing.

PREREQUISITES

COSMIC RAYS*  
LECTURER: GERVASI MASSIMO

CONTENTS
Cosmic rays (CR) will be described in relation to the experimental data, their composition and properties. Main topics will be: origin and astrophysical sources of CR; acceleration processes; interaction with interstellar medium; propagation in the Milky Way; interaction with solar wind; propagation in the solar cavity; interaction with the Earth magnetic field; radiation belts and geomagnetic cut-off; interaction with Earth atmosphere; atmospheric showers; CR in fundamental physics and cosmology.

PREREQUISITES
Knowledge of the previous courses of physics.

DATA AND COMPUTATIONAL BIOLOGY
LECTURER: ANTONIOTTI MARCO

CONTENTS
N/A.

PREREQUISITES
N/A.

WEBSITE  https://elearning.unimib.it/course/info.php?id=25382

YEAR: 2
SEM: 1
ECTS: 6
DEGREE in Computer Science
CONTACT: marco.antoniotti@unimib.it
DATA AND TEXT MINING
LECTURER: CHIESA PAOLA, STELLA FABIO ANTONIO

CONTENTS
To train the expert of knowledge extraction from structured, un-structured and semi-structured data according to the data and text mining methodology. The goal is achieved by:

* teaching how to design, develop and present data mining and text mining projects,
* introducing the main learning algorithms and models for structured, un-structured and semi-structured data,
* exploiting open source platforms, languages and software,
* stimulating the team working methodology.

The student will be able to design, develop, document, and present data and text mining projects solving real world problems.

PREREQUISITES
Basic knowledge on; informatics, probability calculus and statistics.

WEBSITE https://elearning.unimib.it/course/info.php?id=25383

YEAR: 2
SEM: 1
ECTS: 6
DEGREE in Computer Science
CONTACT: paola.chiesa@unimib.it
         fabio.stella@unimib.it
CONTENTS
At the end of the module students will be able to select, design and query a database (relational or not) according to their application needs. Students will be able to use a NoSql database management system to acquire, memorize and query semi structured data.

- Introduction to data management in big data context
- data lifecycle
- Variety: nosql models and architecture
- Volume: data distribution and replication, hadoop architecture
- Velocity: data architecture for capturing and elaborating near real time data.

PREREQUISITES
Knowledge of relational model.

WEBSITE  https://elearning.unimib.it/course/info.php?id=26202

YEAR: 1
SEM: 1
ECTS: 12
DEGREE in Data Science
CONTACT: andrea.maurino@unimib.it
CONTENTS

The course presents computational methods to represent, harmonize and reconstruct the semantics of data used in data science applications, with a particular focus on:

* models and languages developed within the semantic web to support the integration of heterogeneous data (knowledge graph, data linking, ontologies, RDF, RDFS, OWL);
* techniques for the integration of data and vocabularies;
* techniques for extracting information from texts (outline);
* artificial intelligence models for data and knowledge exploration.

PREREQUISITES

Mathematics and computer science as taught in the compulsory courses of the first semester.
DECISION MODELS (module of Machine Learning and Decision Models - F9101Q005)
LECTURER: CIAVOTTA MICHELE, MESSINA VINCENZINA

CONTENTS
This module will emphasizes the relevance of data in decision making. The general aim is to develop skills in mathematical modeling and in algorithms and computational methods to solve and analyze decision problems. The course will illustrates how to formulate real world problems using case studies and examples; how to use efficient algorithms – both old and new – for solving these models; and how to evaluate, draw useful conclusions and derive useful planning information from the output of these algorithms.

PREREQUISITES
None.

DIGITAL MARKETING
LECTURER: tbd

CONTENTS
This course has the aim to show in detail the understanding of digital marketing by focusing on its pillars and future paths, data have a strong impact on this processes. The students will design, plan and build an end-to-end marketing campaign using the most used tools in the market. At the end of the course the attendants will have the basics to develop on their own a digital marketing campaign.

PREREQUISITES

WEBSITE  https://elearning.unimib.it/course/info.php?id=26219

YEAR:  2
SEM:  2
ECTS:  8
DEGREE in Theory and Technology of Communication
CONTACT:  tbd
CONTENTS

After a short introduction to the most recent theoretical approaches to political geography and critical geopolitics, the course focuses first on the historical representation of the ocean as a "political and social space" and on how the sea can be framed by international geopolitical discourse, in relation to the processes of territorialisation, geo-power and extra-territoriality of marine spaces. The second part relates to the geopolitics of the deep sea and in particular it focuses on the definition, value, ownership, access, health and future state of the resource-rich and highly contested sub-surface ocean.

PREREQUISITES

An adequate grasp of the perspectives of the relevant social sciences (geography, politics, economics, law, and sociology). Capacity of working according to multidisciplinary and interdisciplinary perspectives.

WEBSITE  https://elearning.unimib.it/course/info.php?id=25838
ENVIROMENTAL MICROBIOLOGY*
LECTURER: FRANZETTI ANDREA

CONTENTS
The course aims to provide in-depth knowledge on the microbial communities in marine environments. 1. Knowledge and understanding. At the end of the course the student must know: the main microbial populations inhabiting the marine habitats; the impact of microbial metabolism on geochemistry of marine environments; the interaction between marine microorganisms and other organisms; the characterization and monitoring methods of microbial communities. 2. Applying knowledge and understanding. At the end of the course the student must be able to apply the knowledge acquired during the course to real cases to evaluate the impact a certain disturbance (human impact, climate change,...) on marine microbial metabolisms and its possible consequences 3. Making judgments. The student must be able to critically read scientific papers about marine microbiology. 4. Communication skills. At the end of the course the student will be able to describe appropriately the topics studied using the correct specific vocabulary. 5. Learning skills. At the end of the course the student will be able to consult the literature on the topics covered and autonomously integrate the knowledge acquired with others related to marine sciences, with a multidisciplinary approach.

PREREQUISITES
Basic knowledge of microbiology.

WEBSITE  https://elearning.unimib.it/course/info.php?id=25797

EVOLUTION OF SOFTWARE SYSTEMS AND REVERSE ENGINEERING

LECTURER: ARCELLI FONTANA FRANCESCA, PIGAZZINI ILARIA

CONTENTS

The student will learn all the principal techniques used to support software evolution and reverse engineering. The student will be able to use different tools useful for reverse engineering, program comprehension and software maintainability.

Introduction to the principal problematics of reverse engineering, software evolution and program comprehension. Deep study of some topics with different tools experimentations.

PREREQUISITES

Knowledge of Java Language.
Knowledge of design patterns.

EXTRAGALACTIC ASTRONOMY*
LECTURER: DOTTI MASSIMO

CONTENTS
Knowledge of the structure of galaxies. Comprehension of the fundaments of the dynamics of complex stellar systems. Analytical and numerical derivation of gravitational potentials generated by mass distributions. Distribution function analysis for highly-symmetric systems. Understanding of the dynamical secular processes driving the evolution of galaxies and other stellar structures. Knowledge and usage of numerical simulation techniques.

Galactic dynamics. Introduction to N-body numerical simulations. Introduction to the physics of galaxy clusters.

PREREQUISITES
Undergraduate degree in physics

FUNDAMENTALS OF MARINE BIOLOGY*
LECTURER: MAGGIONI DAVIDE

CONTENTS
This course examines different biological and ecological aspects and processes of ocean ecosystems. Topics include the distributions, abundances, life habits and interactions of marine organisms characterizing the main zones and the different systems of the marine environment. The impact of multiple stressors and the problems affecting the marine habitats are also discussed.

Processes of marine organisms, Marine systems and habitats, Functioning of Marine Ecosystems.

PREREQUISITES
None.

FUNDAMENTALS OF MARINE PHYSICAL GEOGRAPHY*
LECTURER: MARCHESE FABIO, SAVINI ALESSANDRA

CONTENTS
Provide knowledge on the processes that form and shape coastal and submarine landforms, controlling their short-term and long-term evolution through time. Provide a basic knowledge about seafloor mapping techniques and methods for submarine geomorphological mapping.

* Data and methods in Marine Geomorphology. Seafloor mapping, seafloor sampling and visual surveys: tools and survey design.

* Coastal landforms and processes. Beach and nearshore systems, coastal sand dunes, delta and estuaries, barrier systems. Rocky coasts and coral reefs.

* Submarine landforms and processes. Drivers of seafloor geomorphic change in submarine environment (tectonic, sedimentology, oceanography and biology). Continental shelf landforms, submarine landslides, submarine canyons and gullies, channel and fans, contouritic drifts, oceanic islands and seamounts, mid-ocean ridges, fluid-escape features, abyssal hills and plains, trenches, bioconstructions.

PREREQUISITES
Fundamentals of Mathematics, Physics and Chemistry.

GEOBIOLOGY*
LECTURER: BASSO DANIELA MARIA, COLETTI GIOVANNI

CONTENTS
To provide the main concepts for understanding the interactions and the coevolution of biosphere, hydrosphere and geosphere.
To acquire the conceptual and operative knowledge for the study and interpretation of the modern marine environments and their reconstruction in the geological record, including the recent past.

Coevolution of geosphere and biosphere, principles of biomineralization, biogenic carbonates, bioconstruction and habitat engineers, sediments and benthos, benthic zonation, introductory biogeochemistry and proxy data in natural archives, past and ongoing global changes.

PREREQUISITES
Fundamentals of Marine Biology, Ecology and Physical geography. General Palaeontology is also suggested.

GEOMETRIC GROUP THEORY
LECTURER: WEIGEL THOMAS STEFAN

CONTENTS
The main scope of the course is to provide the students with the necessary mathematical knowledge, i.e., definitions, notions, and the statement of the theorems of Bass-Serre theory on groups acting on trees. Apart from the necessary theoretical competences allowing the student to follow the proof of the main results of the theory, we also aim to provide the student with the ability to apply the theory in exercises and open problems (problem solving). The course will finish with a general discussion on important applications of the theory in group theory, like the discussion of the trefoil knot group, Ihara’s theorem, the boundary of a tree, etc..

PREREQUISITES
Algebra I, Geometria I.

CONTENTS
Acquire basic knowledge in the field of gravitational waves, which have recently been confirmed as an extraordinary tool for understanding the universe and the objects that populate it.

At the end of the course the student:

* will know how to derive the general formula for the amplitude of a gravitational wave
* will know the main sources of gravitational waves and the type of signals they emit
* will know the main techniques of gravitational waves observations, and the type of signals they observe.

PREREQUISITES
None, besides the basic classes of the bachelor..
CONTENTS

Mainly referring to the general framework of the Island Studies, the course aims to provide a set of tools useful to the analysis of socio-spatial dynamics within island systems. Furthermore, the course aims to provide tools and interpretative models useful to understand how, at local scale, human communities (privately, socially and politically) cope with socio-environmental changes, crises, conflicts and transitions by producing a set of resilient practices, knowledge and adjustments.

Geography of Archipelagos and Island States; Human Geography of Islands; Human Ecology of Island Systems; Environmental challenges in Small Island States; Trans-scalar Spatial Analysis of Island Systems; Environmental Policies of Small Island States, Islands as Ecotones, Archipelago and Aquapelagos.

CONTENTS

This course aims at introducing the basic concepts, the formal models and the main techniques to define and design Information Retrieval Systems (also called Search Engines, and in particular Web Search Engines when working on the Web to the aim of retrieving Web pages) and Information Filtering (IF) systems. In particular, various techniques for the analysis and the indexing of texts will be presented, also including a basic introduction to multimedia documents indexing. Moreover, the issue of estimating the relevance of documents to a query will be addressed: several models finalised at the assessment of a numeric estimate of relevance (degree or probability) of a document to a query will be explained. The main approaches to personalized search will be presented. The course will also introduce additional applications related to text analysis and mining, such as the crawling and analysis of user generated content on Social Media (e.g. Twitter, Facebook, etc.). The important issue of the evaluation of the credibility of the content generated by users in social media will be also presented.

PREREQUISITES

Basic knowledge of statistics and of linear algebra.
INTERNATIONAL LAW OF THE SEA AND MARINE ENVIRONMENT PROTECTION

LECTURER: TANI ILARIA

CONTENTS

The aim is to provide students who have a scientific background with some basic knowledge of the international legal regime that presently applies to marine spaces, with particular emphasis on the protection of the marine environment.

The legal regime of the seas at the world basis, as resulting from the 1982 United Nations Convention on the Law of the Sea.

A regional system for the protection of the marine environment, as resulting from the 1976-1995 Barcelona Convention for the Protection of the Marine Environment and the Coastal Region of the Mediterranean.

CONTENTS

The present course examines key aspects and critical issues of marine aquaculture, as part of the primary production activity (aquaculture) with the largest growth rate among other food production techniques worldwide. Aquaculture nowadays supply fifty percent of fish products consumed in the world. The big challenge that aquaculture is facing concerns with sustaining and ever increasing demand circumscribed by environmental sustainability. Therefore, the course aims to provides and overall knowledge of marine aquaculture, its potential in food security and the negative aspects/mitigations measures of the subject.

MARINE MOLECULAR BIOLOGY
LECTURER: ORLANDI IVAN, PEREIRA BOEGE WALTER ANTONIO

CONTENTS
This course introduces the basic aspects of the molecular and cellular biology of marine organisms. Topics include the methodology and applications of molecular biology as a means of examining ecosystem-wide biological processes. At completion of the course, the students should be able to define specific biological problems with corresponding molecular markers, to design compatible experimental procedures and to define the necessary analytical protocols.

Principles and applications of molecular biology tools (genomics, transcriptomics and proteomics) for the study of marine ecology.

MARINE VERTEBRATE ZOOLOGY
LECTURER: DE MADDALENA ALESSANDRO, VALSECCHI ELENA AGNESE

CONTENTS
The course aims to allow students to:

1) Recognize and be able to classify the major groups of marine vertebrates in the wild;
2) Learn specialized terminology and basic concepts of the zoology of these groups of organisms;
3) Understand selected external and internal structures which allow adaptation to the aquatic environment;
4) Learn about methodologies of study of these classes of organisms in the wild and measures taken for their conservation.

The course covers marine vertebrates’ systematics, evolutionary history, anatomy, physiology, behavior, conservation and research.

METALS SCIENCE AND SUSTAINABILITY
LECTURER: PITTACCIO SIMONE

CONTENTS
The teaching aims to provide a broad foundational knowledge of metallurgy and metallic materials. The learning objective is acquiring a general understanding of how chemophysical, microstructural and technological factors can impact on the final properties of metals and alloys.

The course topics can be divided into three major blocks. The first block includes basic chemophysical and metallurgical phenomena that are involved in the development of phases and microstructures in metals and alloys, and characterisation methods. The second block comprises examples of technological processes used for the synthesis and transformation of metallic materials, and for the setting of their final properties. The third block provides an overview of the main metallic material classes by composition, including classification, applications and life cycle.

PREREQUISITES
Basic knowledge of: Calculus, Thermodynamics, General Chemistry, Solid Mechanics, Crystal Structures, Elements of X-ray Diffraction, Calorimetry.

MOLECULAR ELECTRONICS AND PHOTONICS

LECTURER: tbd

CONTENTS
The course deals with the physical principles of the properties of molecular semiconductors. Molecular crystals and quantum mechanic origins of the intermolecular forces. Carbon-based policonjugated systems: anisotropy, low-dimensional properties. Polymeric semiconductors.

* Electronic states of policonjugated molecules and polymers.
* Excited states in molecular crystals.
* Electroluminescence and led devices.
* Organic photovoltaic cells.
* Molecular electronics and photonics.

PREREQUISITES
This course requires a good knowledge of quantum physics (time-independent and time-dependent Schroedinger Equations, perturbation theory, Fermi golden rule), structure of matter (atoms, molecules and solids) and some basic knowledge of organic chemistry.

MULTIMEDIA DATA PROCESSING
LECTURER: CORCHS SILVIA ELENA, GASPARINI FRANCESCA

CONTENTS
The course offers an introduction to multimedia signals: images, video and audio, presenting the main methods of processing, digitizing and encoding. At the beginning the course analyzes the analog to digital conversion in particular by introducing the concepts of sampling and quantization. The main processing algorithms especially for the case of digital images are shown: histogram modification, filtering and white balancing. During the practical activities the student will apply the acquired theory to audio, image and video signals.

The course provides the basis for digitizing and encoding analog signals: images, audio and videos. It also provides the competences to develop algorithms to process, code and compress digital signals.

PREREQUISITES
None.

M
YEAR: 1
SEM: 2
ECTS: 6
DEGREE in Theory and technology of communication
CONTACT: francesca.gasparini@unimib.it
CONTENTS

The aim of the course is to provide in depth knowledge on various classes of nanomaterials that will constitute the main ingredient of future nanotechnologies. For each materials class, the synthesis approaches and the physical mechanisms underpinning their functionality will be studied discussed in detail with particular focus on size-related processes, such as quantum and dielectric confinement. Applications of nanomaterials in various technological fields will be considered and their functioning principles will be studied, highlighting promising strategies for their design and optimization. Regulation aspects regarding health, safety and environmental aspects of nanotechnology will be discussed.

PREREQUISITES

Basic chemistry and chemical physics. Quantum mechanics, solid state physics.

NUCLEAR AND SUBNUCLEAR MEASUREMENTS LABORATORY I
LECTURER: BROFFERIO CHIARA, TERRANOVA FRANCESCO

CONTENTS
The laboratory course provides an introduction at graduate level of the experimental techniques employed in particle and nuclear physics, including applications to medical and environmental physics.
The students carry on a full experiment in nuclear and particle physics, including the characterization of the source, detector, front end electronics, data acquisition and analysis.

PREREQUISITES
Experimental and analysis techniques from the Bachelor level lab courses.

WEBSITE  https://elearning.unimib.it/course/info.php?id=26343

NUCLEAR AND SUBNUCLEAR MEASUREMENTS LABORATORY II*
LECTURER: PREVITALI EZIO, TERRANOVA FRAMCESCO

CONTENTS
In this II part, the students deepen the experimental techniques developed in the I part of this Laboratory. The experimental apparatus assembled in the previous course is now employed to perform more sophisticated measurements; here the assessment of systematic bias plays a leading role in data taking and analysis.

PREREQUISITES
Laboratory of nuclear and particle physics, I part.

OPTICAL MICROSCOPY*

LECTURER: tbd

CONTENTS

To offer an introduction to optics applied to the development of optical devices for the research and development in Biophysics, Biotechnology, Medicine and Biophotonics.

- Geometrical Optics for lenses and mirrors and compositions of lenses and stops.
- Physical Optics, Fresnel Theorem and its applications.
- Aberrations of optical devices
- Scanning Optical Microscopies.

PREREQUISITES

Knowledge of electromagnetic waves and of the mathematical treatment of the wave equation. Knowledge of the fundamentals of the light-matter interactions modes. Ability to solve partial differential equations; trigonometry.

PHYSICAL CHARACTERIZATION OF MATERIALS WITH LABORATORY

LECTURER: VEDDA ANNA GRAZIELLA

CONTENTS
The course includes two parts with one final examination. The first part consists in lessons aimed at the presentation of the fundamental concepts of optical and vibrational spectroscopy of solids, together with the description of selected experimental techniques; the second part consists in an experimental activity.

Optical and vibrational spectroscopy of solids. Introduction to selected experimental techniques.

PREREQUISITES
Fundamentals of the structure of matter.

WEBSITE  https://elearning.unimib.it/course/info.php?id=25611

YEAR: 1
SEM: 1+2
ECTS: 8
DEGREE in Materials Science
CONTACT: anna.vedda@unimib.it
CONTENTS
Importance of defects on material properties, mainly in semiconductors. Elements of physical chemistry of surfaces. Adsorption phenomena: physisorption and chemisorption. Principal methods and techniques of Surface Characterization. Growth techniques of massive materials and thin film deposition procedures. Correlation of properties, defects and growth techniques.

PREREQUISITES
Main Physical Chemistry I and Materials Science topics in 1st cycle bachelor degree programs.

WEBSITE  https://elearning.unimib.it/course/info.php?id=25612
CONTENTS
The course is devoted to provide the student with the fundamentals of the physics and technology of semiconductors devices. In addition to lectures the course offers two laboratory activities dedicated to state of the art electrical characterization and simulation of the devices.

Physics of conventional electronic devices (junctions, transistors), of ultrascaled nanoelectronic devices (single electron and single atom transistors), and of emerging and novel nanoelectronic and spintronic devices for logic and memory applications, and for quantum information processing. Nanoelectronic devices (EOS, EOSFETs, Memristors) for neuromorphic applications will be also discussed.

PREREQUISITES
Solid State Physics and Physics and Semiconductors.

PHYSICS OF HOMOGENEOUS AND NANOSTRUCTURED DIELECTRICS
LECTURER: PALEARI ALBERTO MARIA FELICE

CONTENTS
The course starts from the description of polarization effects in materials to achieve the consciousness of the physical mechanisms responsible for the refractive index dispersion, optical absorption, light emission yield and nonlinear response in homogeneous, composite, and nanostructured systems as a function of materials features, structural order and disorder, and working parameters as temperature, stress, and light intensity. The lectures highlight the main properties making silica-based oxides key dielectric materials in photosensitive systems for the fabrication of fibre filters and fibre sensors, in optical amplifiers as doped active glasses, and in even more complex systems via nonlinear response.

PREREQUISITES
Basic knowledge of electromagnetism.

SEDIMENTARY PETROLOGY*
LECTURER: ANDO' SERGIO, GARZANTI EDUARDO ALDO FRANCO

CONTENTS
This course in Sedimentary Petrography is dedicated to our MSc and PhD Students, worldwide interested in heavy mineral identification and provenance studies of sediments and sedimentary rocks carried out with classical optical methods and supported by innovative methods as Raman spectroscopy.

* Introduction to Sedimentary Petrography
* Sampling in the field
* Laboratory for heavy mineral separation
* Petrography of siliciclastic detritus
* Heavy-mineral studies
* Physical processes
* Chemical processes
* How to count in provenance studies and data processing
* Geochronology of detritus
* Applications to Petroleum Geology.

PREREQUISITES
A good knowledge of mineralogy and petrography is necessary. A complementary course in Basin analysis for a better understanding of plate tectonic and regional geology is also important. A real interest in learning techniques for the study of the mineralogy of sediments in the laboratory of sedimentology and sedimentary petrography is strongly recommended. Students interested in petroleum geology are strongly encouraged to follow this course.

CONTENTS
A first part of the course is devoted to the treatment of simpler phenomena, as described in terms of non-interacting particles (Electrons or phonons), with particular attention in teaching the skill of developing analytical models, which allow to solve complicated problems by ingenious simplifications. The second part analyzes more complex phenomena, generated by the interaction among particles, which give rise to significant macroscopic properties of the perfect and infinite solid. In this part, the focus is placed on the understanding of non-intuitive concepts and the ideal line of reasoning, preferring - also here - the methodological approach rather than the taxonomic one. The complementation of a main text with several others, depending on the topic, is an important aspect of the teaching method, that is, to acquire the habit of consulting different sources and comparing them critically.

PREREQUISITES
Atomic and molecular quantum physics; Elementary introduction to Solid State Physics; A short course in advanced calculus.

At the end of the course students should be familiar with the basic ideas of Statistical Mechanics such as the statistical approach to the derivation of the equation of states for classical and quantum gases, the theory phases transitions and of critical phenomena.

Statistical ensembles, derivation of the equation of state for classical and quantum gases, theory phases transitions, critical phenomena and renormalization group.

PREREQUISITES
N/A.

WEBSITE  https://elearning.unimib.it/course/info.php?id=26356

*IF THE TITLE APPEARS IN ITALIAN, PLEASE CHECK THE ENGLISH VERSION.*
CONTENTS

The main goal of the Course is to provide to the students some key theoretical/computational tools for approaching at the atomic scale thermodynamics and kinetics of solids.

Summary of basic concepts in classical statistical mechanics, adiabatic approximation, classical approximation for the motion of nuclei, ab initio and classical molecular dynamics, scientific coding with Matlab, implementation in Matlab of a molecular dynamics code, application of the molecular dynamics code, configurational Monte Carlo, implementation of a configurational Monte Carlo code, kinetic Monte Carlo, transition state theory.

PREREQUISITES

Basic classical and quantum mechanics. Knowledge of the Boltzmann distribution.

WEBSITE  https://elearning.unimib.it/course/info.php?id=25601
STELLAR ASTROPHYSICS*
LECTURER: COLPI MONICA

CONTENTS
The aim is at providing the tools for understanding the physics of stars, from their formation in the interstellar medium to their death as collapsed objects. These studies find their application within the nascent field of gravitational wave astrophysics and in the context of galaxy formation and evolution.

Introduction to stellar astrophysics: formation, structure and evolution.

PREREQUISITES
Calculus, Classical Mechanics, Electromagnetism, Condensed Matter, Quantum Mechanics.

CONTENTS

The course has two targets: on the one hand, to complete the knowledge acquired during the courses of Solid State Physics, answering the fundamental question: what happens to the properties of a perfect and infinite solid when the lattice periodicity ends at a surface? On the other hand, it is intended to provide the basis for all applications of Semiconductor Physics, Physics of Electronic Devices and Nanotechnologies, inevitably involving surfaces, interfaces and epitaxial depositions. The approach is both theoretical and experimental.

PREREQUISITES

Advanced Course in Solid State Physics.

TEXT MINING AND SEARCH
LECTURER: PASI GABRIELLA, VIVIANI MARCO

CONTENTS
At first this course will provide the definition of Text Mining and will point out the basic differences between Data Mining and Text Mining.
The course will introduce then some main tasks involved by Text Mining, which include Information Retrieval (IR), Information Filtering (IF), Text Summarization, and Text Classification. The issues of text pre-processing and analysis, and of text indexing and representation will be addressed. Then the course will introduce the previously mentioned tasks. Some open source software for Text Mining and Search will be introduced and practiced.

PREREQUISITES
Basic knowledge of statistics and of programming languages.

THEORETICAL PHYSICS I*
LECTURER: PENATI SILVIA

CONTENTS
Introduction to the main concepts of relativistic quantum field theory applied to the study of fundamental interactions.

Formulation of a relativistic quantum field theory in terms of particles and fields. Perturbation theory, Feynman diagrams and the main processes of quantum electrodynamics.

PREREQUISITES
Deep knowledge of Classical Physics and Quantum Mechanics at the level of a Bachelor in Physics is required. A basic familiarity with Special Relativity, Lorentz transformations and relativistic kinematics is given for granted. The structure of the Lorentz group and the covariant formalism will be subjects of the course.

THERMODYNAMICS AND KINETICS OF MATERIALS*
LECTURER: MUSTARELLI PIERCARLO

CONTENTS
The aim of the course is to provide students with the knowledge and skills necessary to master the complex mechanisms and processes that underlie the phase transformations of materials, both concerning the thermodynamic aspects and the kinetic ones. The knowledge and skills acquired will be applied to some case studies of technological relevance in the field of functional materials.

* Thermodynamics and kinetics of solids.
* Phase transformation processes and the kinetic mechanisms (diffusion, transport) that are at their base.
* Fundamentals of some spectroscopic techniques able to investigate the correlations between structure, dynamics and functional properties of some classes of solids.

PREREQUISITES
Basic thermodynamics. Basic crystallography.

CONTENTS
The course introduces students to the main principles of the Ubiquitous Computing research area and, successively, focusses on those themes related to the definition, modeling, and use of contextual information in designing and developing ubiquitous/pervasive and context-aware technologies.
An overview of the various accepted meaning of Context and Context-Awareness will be presented; then the course focusses on the definition and use of those contextual information asking for complex representations (e.g., those information related to the user’s activity and his/her preferences).

PREREQUISITES
A good knowledge of the basis of ICT, web technology & app.
WAVES AND TURBULENCE
LECTURER: COLOMBO ROBERTO, PASQUERO CLAUDIA

CONTENTS
Provide information on available oceanographic databases and how their data are gathered and stored. Show how data can be visualised and analysed to answer to specific questions, using statistical methods and models, with Matlab software.

PREREQUISITES
Physics of the Sea
